

Enhanced Preventive Drug Coverage

EPC added \$0 cost Enhanced Preventive Drugs to the CVS/Caremark pharmacy benefit effective January 1, 2022. This expanded \$0 coverage may significantly reduce the prescription cost during the plan year.

The plan enhancement covers “preventive” prescriptions at NO cost to the member for many conditions, including:

- Cholesterol
- High Blood Pressure
- Diabetes
- Mental Health/Depression
- Heart Disease
- Asthma

How do I save money?

You'll pay \$0 for medications classed as an Enhanced Preventive Drug, even if you haven't met your plan deductible.

Is it complicated?

Not at all. If your prescription falls under the Enhanced Preventive Drug benefit, Your pharmacy will automatically charge you \$0 when you pick up your prescription.

How can I tell what drugs are covered as Enhance Preventive?

Log into your www.caremark.com account and search for your prescriptions.

HSA plans:

- if you have **NOT** met your deductible and the prescription shows a \$0 cost it is Enhanced Preventive.
- If you **HAVE** met your deductible, log in to Benelogic, click on the Resource tab, then click on CVS Drug Pricing Tool. Search your prescriptions from here, and if it says \$0 it is Enhanced Preventive.
